

New from Bose

NEW uMusic®+ intelligent playback system

NEW uMusic®+ intelligent playback system

Stores and manages CD and MP3 music for an enhanced listening experience.

Intelligent music storage and playback... only from Bose

Incorporating an array of features for additional convenience and ease of control, uMusic®+ is the new music storage and intelligent playback system from Bose. It can help you explore, enjoy and relate to the different aspects of your music collection more rewardingly than ever before.

uMusic®+ technology is an integral part of the latest BOSE® LIFESTYLE® 48 and 38 DVD home entertainment systems and BOSE® 3·2·1® GSX and 3·2·1® GSXL DVD home entertainment systems. It lets you easily and quickly store up to 340 hours (LIFESTYLE® 48 system and 3·2·1® GSXL system) or 200 hours (LIFESTYLE® 38 system and 3·2·1® GSX system) of CD and MP3 music in the entertainment system's media centre, even while using other facilities within your BOSE® system.

uMusic®+ automatically sorts, catalogues and cross-references the tracks, using a built-in and regularly updated database of music and artist information. Your entire stored music library can be viewed on your TV screen. You can create up to nine independent playlists while listening to your system, review their contents, instantly access any CD or MP3 file via the remote handset, and effortlessly control which songs are played.

However, uMusic®+ also does much more. This intelligent playback system monitors every track that you play all the way through, or interrupt or skip. Similarly, it remembers other individual users' choices, monitors variations according to mood, and records personal ratings of specific tracks when keyed into the remote.

The more music that you and the other members of the household play, the more uMusic®+ learns about what each person likes to hear, and the system organises and retains the accumulated information in up to nine user-nominated uStations™, which can be allotted either to a person or to an activity such as dining or partying.

Over time, a uStation™ becomes rather like a personal radio station, able to select and play the right kind of music to suit the particular user or occasion, and even ready to suggest similar tracks which may have been overlooked or forgotten.

The user interface of uMusic®+ has been redesigned for enhanced user-friendliness and improved interaction with the system, making it even easier to manage and access your music collection and to appreciate it to the full.

Benefits at a Glance

Stores CD and MP3 music

Easy, convenient storage of up to 340 hours (LIFESTYLE® 48 system or 3·2·1® GSXL system) or 200 hours (LIFESTYLE® 38 system or 3·2·1® GSX system) of CD or MP3 music in your BOSE® system's media centre.

Intelligent playback

uMusic®+ learns the music you like, and when. It builds the ability to select tracks to suit the individual and the occasion, and even to suggest other similar music. Up to nine personal uStations™ can be dedicated to different users' tastes or moods.

Improved database and genre management

Automatic cataloguing and cross-referencing of stored music against 30 different criteria, using a comprehensive and annually updated database.

Extensive playlist functionality

Up to nine independent playlists can be created, with instant overview of their contents.

User-friendly interface

The all-new user interface makes interaction with uMusic®+ even more of a pleasure.
